Sample Question Types:

- Multiple Choice Questions (MCQs)
- Fill-in-the-blanks
- True/False statements
- Numerical-based quick questions

Investigation: The inclusion of MCQs reflects an emphasis on rapid assessment, possibly designed to differentiate students who possess foundational knowledge from those requiring deeper conceptual understanding.

Section B: Short to Medium Answer Questions

This section contained around 6-8 questions, demanding more detailed answers, often involving explanations, calculations, or diagrammatic representations.

Question Types Included:

- Describe the hybridization in methane.
- Explain the effect of atomic size across the periodic table.
- Calculate molar mass and related computations.
- Describe the process of electrolysis of molten sodium chloride.

Analysis: The questions here probe students' understanding of core principles and their ability to interpret and manipulate chemical data, indicating a shift towards application-based learning.

Section C: Long Answer/Problem-Solving Questions

This final section typically contained 2-3 comprehensive questions, requiring extended responses, derivations, or detailed explanations.

Sample Focus Areas:

- Derivation of rate laws in chemical kinetics.
- Explanation of the mechanism of SN1 and SN2 reactions.
- Application of thermodynamics to real-world problems.
- Structural elucidation using spectroscopic data.

Implication: These questions are designed to challenge higher-order thinking skills, emphasizing conceptual clarity and analytical capabilities.
