Firing Order of the 1988 Mercury Tracer 1.6L Engine

The 1988 Mercury Tracer with a 1.6L SOHC engine shares its firing order with many Ford and Mazda engines of the same era, owing to shared design principles and manufacturing platforms.

The Correct Firing Order

1 - 3 - 4 - 2

This sequence corresponds to the cylinders numbered as follows:

| Cylinder Number | Position (from front of engine) | Notes |

|-----|-----|-----|

| 1 | Front (driver's side, right) | First to ignite |

| 2 | Rear (driver's side, right) | Last to ignite |

| 3 | Front (passenger side, left) | Second to ignite |

| 4 | Rear (passenger side, left) | Third to ignite |

Cylinder Arrangement

The inline-4 engine configuration places cylinders in a straight line, with the firing order running sequentially along the length of the engine block.

Visualizing the Firing Order

An easy way to remember the firing order is to visualize the engine as a sequence of pistons firing in a pattern that balances power and minimizes vibrations. For the 1.6L engine:

- The distributor cap's rotor will rotate, delivering spark to the cylinders in the 1-3-4-2 pattern.
- The order ensures that power strokes are evenly spaced, leading to smoother engine operation.

Understanding the Distributor and Ignition System

The distributor plays a critical role in delivering high-voltage sparks to the correct cylinder at the right time, according to the firing order.

Components involved:

- Distributor Cap: Contains the rotor and terminal points for each cylinder.
- Rotor Arm: Rotates inside the cap, directing the spark to each cylinder.
- Ignition Wires: Conduct high-voltage current from the distributor to the spark plugs.
- Ignition Coil: Converts low voltage to the high voltage necessary for spark generation.

How it works:

The distributor's rotor spins as the engine runs, pointing to each terminal in the firing order sequence. When the rotor contacts the terminal for a specific cylinder, the high voltage jumps across to the spark plug, igniting the air-fuel mixture.

Common Firing Order-Related Issues and Troubleshooting

Incorrect firing order can cause a range of engine problems. Here are some common symptoms and troubleshooting steps:

Symptoms of Incorrect Firing Order

- Misfiring or backfiring
- Rough idling or stalling
- Decreased power and acceleration
